Toto Talks Malaysia -

The result in Singapore came as a surprise for us all "" and the danger of a result like that is to misjudge your own level of performance. But within the team, our focus since finishing first and third has been on the painful moments of the Singapore weekend - why we struggled in the long runs on Friday and our lack of performance over one lap in qualifying - to learn as much as possible for the rest of the season. We have deepened our understanding of those problems and we will take that learning with us into the final races.

The last race was a strong reminder that sport always has the power to surprise and defy all predictions. We have been on the receiving end of those bad moments before, and we know that they can happen as easily to us as anybody else. The result in Singapore doesn't change anything in terms of how we approach the final six races, beginning this weekend in Malaysia. We will need to be at the top of our game on every track if we want to maintain our lead in both championships to the end of the season.

The first challenge, of course, is Malaysia. This will be a weekend with great resonance for us: we have a very close relationship with the country, thanks to our friends at PETRONAS, and the race has given us many moments of drama and glory over the years. Our record there in recent seasons has been mixed but the fundamental characteristics of the circuit, with its sweeping corners and long straights, should mean the car is well-suited to the circuit.

The weather conditions are challenging for the cars, the tyres, the drivers and the team personnel and can often complicate the overall picture; good reliability will be crucial in every aspect of our operations. But it goes without saying that our target is to deliver a winning performance to mark the final Grand Prix at Sepang "" and to build on the good momentum we have enjoyed since the summer break.

Few races test the physical fitness of the modern-day Formula One driver quite like the Malaysian Grand Prix. The 5.543 km Sepang International Circuit plays host to one of the most gruelling events on the calendar, with ambient temperatures averaging more than 30°C and humidity typically around 70%.

"Racing in Malaysia, it's like being in a mild sauna," [?] says Valtteri Bottas. "We have all of our gear on "" plus the helmet "" and the car is hot as well. The seat itself is warm, and then we're surrounded in the cockpit by the electrical boxes. It gets really hot." [?]

In Sepang, cockpit temperatures frequently hit numbers approaching 50°C. And for the driver "" cocooned in a hot, stuffy, confined

space, tightly packaged themselves in layers of fireproof nomex and fighting extreme G-Forces on their body ““ it’s a serious test of physical fitness.

For this reason, many drivers tend to arrive in Malaysia as early as possible in an effort to acclimatise to the heat and the humidity.

“It takes three or four days to get your body used to the heat,” [?] explains Valtteri. “You’ll start off with some training outside, so that your body can sweat properly. We won’t be able to withstand the heat like a local ““ but those days of acclimatisation make a difference.” [?]

This is one of the races on the calendar where all the physical training drivers put themselves through during the off-season ““ and then maintain over the course of the year ““ really shows.

During a typical Malaysian Grand Prix, a driver’s heart rate can reach as high as 170 bpm, burning up to 1,500 calories and losing around three litres of body fluid in sweat. Over a 90 minute Grand Prix, that’s roughly 5% of their overall body weight, making hydration management crucial if they are to see off the threat of fatigue.

“One of the main things is to keep hydrated,” [?] says Valtteri. “If you dip just once with your hydration, it takes a long time to get back on track. We have to drink lots of water as well as sports drinks containing electrolytes to keep the levels at the right place. You absolutely need to make sure you’re well hydrated.” [?]

Many F1 drivers now wear a cooling vest pre-race while waiting on the grid to keep the harsh heat off them.

“The vest isn’t cold, it’s at a comfortable room temperature,” [?] explains Valtteri. “It takes the heat off rather than cooling your body. Body temperature rockets during the race, but the vest helps you to keep it under control before the start. Even if the vest saves you just 0.4 degrees in body temperature before you set off, that’s 0.4 degrees you’ll save by the end of the race ““ it can make a difference.” [?]

During the race itself, drivers rely on their in-car drinks bottle ““ filled with a mixture of sports drink and electrolytes ““ to replace lost fluids from sweat. It’s a battle against fatigue. And if there’s any race you don’t want your drinks bottle to fail, it’s Malaysia or Singapore“!

“We sweat more than three litres during a race like Malaysia,” [?] says Valtteri. “If we can’t replace that, it affects our focus. Fatigue sets in. It’s more difficult to be consistent and, in the very worst cases, you can develop cramps or even problems with your vision.” [?]

Post-race, the immediate focus for the driver is on cooling their body and rehydrating. Those enticing bottles of water don’t last long in the cool-down room before the drivers hit the podium for the slightly sweeter taste of champagne!

And it’s not just the drivers that have to contend with the sweaty conditions. Working temperatures in the garage exceed 40°C in Sepang, with humidity often rising above 90%. It’s a double whammy, meaning increased sweat and a greater chance of dehydration.

The team ““ especially the mechanics, who have to suit up during pit stops ““ are constantly reminded to keep up their fluid levels, or risk dehydration. Long-haul flights, too, have a dehydrating effect, owing to the recirculated air. So, the battle for the team starts before they even hit the track, on the flight over to Kuala Lumpur.

For the Silver Arrows, Hints Performance are on hand to ensure the team are well educated on staying hydrated, so that everyone ““ from the drivers and management to the mechanics and garage technicians ““ arrive in the right state to go racing.

From the balance between staying active and relaxing at the right times outside of work to managing water consumption and hydration sachets during busy periods and even levels of exposure to bright light, there are a plenty of tricks of the trade to keep everyone on their feet. No matter where you turn in Formula One, performance optimisation isn’t far away.

Handling the heat in Malaysia isn’t easy. But the men and women soldiering through the sweat will be doing all they can to stay cool as the title battle heats up in Sepang“!
